

HARISH CHALLA

Software Engineer | Python | Full-Stack | AWS

• +353 899608618 • harishchalla.ire@gmail.com • [LinkedIn](#) • Dublin, Ireland • [Credly](#)

PROFESSIONAL SUMMARY

MSc Cloud Computing graduate with hands-on experience building **Python backend services, full-stack web applications and AWS cloud infrastructure**. Comfortable working across Python, FastAPI, React, TypeScript, PostgreSQL, Docker, Terraform and CI/CD. Built and deployed a full-stack travel planning platform independently, covering frontend, backend APIs, database security, AWS infrastructure, automated testing, observability and deployment pipelines. Seeking an intensive engineering learning experience through HENNGE's Global Internship Program, with a strong interest in backend development, full-stack engineering and DevOps.

TECHNICAL SKILLS

- **Engineering:** Linux/Unix, Git, Testing, API Development, Cloud Infrastructure
- **Programming Languages:** Python, Bash, SQL, JavaScript, Typescript
- **Cloud & DevOps:** AWS, Docker, Terraform, GitHub Actions, CI/CD
- **Backend & Web:** FastAPI, Flask, Django, REST APIs, React
- **Databases:** PostgreSQL, MySQL, DynamoDB

EXPERIENCE

RISEUP WITH SERVICENOW PROFESSIONALS PROGRAM

Participant

August 2026 – November 2026 | Instructor-led Training, Online | Ireland

- Configure ServiceNow using Flow Designer, Integration Hub, Studio, Business Rules, Client Scripts, UI Policies, and UI Actions.
- Practice user administration, access controls, ITSM, Import Sets, and Transform Maps within ServiceNow environments.
- Troubleshoot platform issues, test configuration changes, and maintain technical documentation.
- Develop practical knowledge of ServiceNow workflows, integrations, administration, and platform configuration.
- Prepare for ServiceNow Certified System Administrator and Application Developer credentials.

INNOVATION INFO PVT LTD

Python Developer Intern

May 2024 – October 2024 | Hyderabad, India

- Developed Python scripts to automate internal tasks and support day-to-day technical activities.
- Analysed Linux logs, reproduced issues, and applied fixes to improve application reliability.
- Investigated REST API and backend issues, supporting troubleshooting and resolution.
- Used Git to manage code changes and support testing and deployment activities.

PETROGAS GROUP LIMITED (APPLEGREEN PLC)

Sales Assistant

April 2025 – Present | Navan, Ireland

EDUCATION

MSc, Cloud Computing

NATIONAL COLLEGE OF IRELAND, DUBLIN | January 2025 – January 2026

B.Tech, Electronics & Communication Engineering

GODAVARI INSTITUTE OF ENGINEERING AND TECHNOLOGY, INDIA | July 2020 – April 2024

SELECTED PROJECTS

MINUTELY - Full-Stack Travel Planning Platform | 2025

- Designed, built and deployed a full-stack travel planning platform independently, using **React 19/TypeScript** for the frontend and **Python FastAPI** for REST APIs.
- Implemented PostgreSQL row-level security to isolate multi-user data.
- Provisioned AWS infrastructure with **Terraform**, including VPC, ECS Fargate, ALB, ECR, CloudWatch, SNS and least-privilege IAM, with separate staging and production configurations.
- Built GitHub Actions CI/CD with **ESLint, Ruff, type checking, unit tests, coverage thresholds and Playwright E2E tests**, including staging deployment and production approval.
- Implemented security and reliability controls including Pydantic/Zod validation, OIDC-based AWS authentication, non-root containers, health/readiness endpoints and structured logs with correlation IDs.
- Added observability and operational automation through CloudWatch alarms, metrics, incident runbooks and **ServiceNow REST API integration** for automated incident/change workflows.

AWS FUNCTION DELIVERY NETWORK | September 2025 – January 2026

- Built a serverless file-processing system using AWS Lambda, API Gateway, DynamoDB, S3, EC2, Python, and CloudWatch to support automated file-processing workflows.
- Developed Python-based AWS functions and integrated multiple AWS services to create an event-driven cloud application.
- Implemented LRU caching and DynamoDB caching to reduce repeated processing and improve application response times.
- Reduced repeated-request latency by 95%+, improving response times from 492–2,638 ms to 0–21 ms.
- Used CloudWatch for application monitoring and performance analysis, identifying opportunities to optimize repeated requests.

CLOUD-BASED JOB PORTAL | 2025

- Developed a Flask-based web application and containerized the application using Docker for cloud deployment.
- Built and deployed the application on AWS ECS Fargate, using Amazon ECR for container image management.
- Implemented a CI/CD pipeline using GitHub, AWS CodePipeline, and CodeBuild to automate application build and deployment workflows.
- Configured IAM and Security Groups to support controlled access and secure cloud infrastructure.
- Integrated CloudWatch and AWS X-Ray for application monitoring, troubleshooting, and visibility across the deployed environment.

CERTIFICATIONS & TRAINING

- **AWS Certified Cloud Practitioner**
- **Microsoft Certified:** Azure Fundamentals
- **GitHub Foundations**
- **Docker Foundations Professional**
- **ServiceNow Flow Designer Micro-Certification**
- **Welcome to ServiceNow**
- **Cisco Linux Unhatched**
- **AWS Badges:** Incident Response, Application Networking, Serverless
- **AWS Educate:** Cloud Operations, Security, Networking, Compute, Storage, Databases, Serverless
